This event is better known because of the landslide which took place in the Corinthian Gulf. In this area, several repeated landslides have taken place with or without earthquake. Sometimes, the landslides themselves have caused earth tremors. De Ballore relates the event to the corresponding one in Helike which was in the same area, and slid and sank in the sea in 373 B.C. It is likely that both events had the same origin.

The fissure line on the ground stretches along the feet of the hills which are north of the Corinthian Gulf (Fig. 1). The area north of the fissure suffered a landslide of about two metres.

Ref: 25, 26.

This event is better known because of the landslide in the northern Euboic gulf. The earthquake known as the earthquake of Locris, started on April 20, 1894 with a medium tremor, with almost no post-earthquake tremors. On April 27, a powerful tremor shook the area with a considerable landslide and a series of post-earthquake tremors some of which were quite strong.

The ground fissure was almost straight (Fig. 2) on a stretch of about 55 km from east-southeast (E-SE), to west-northwest (W-NW). The width of the fissure ranged from 0.30 m to 0.15 m in alluvial soils.

45. 1894 July 10. Constantinople (Istanbul) ($m=iii$).

Ref: 18 (pp. 139, 180-185).

46. 1897 December. Ionian Islands. Zante.

Ref: 62a.

H. Tsitselis in his « Cephalinian Melanges » states that the earthquake on that date was followed by tsunami:

« In December, powerful and frightening earthquakes took place, and also in January, attended by receding sea water from the shore, a phenomenon which is rare... » (Vol. 2, 1960 p. 464).

47. 1898 December 3. Ionian Islands. Zante ($m=ii+$).

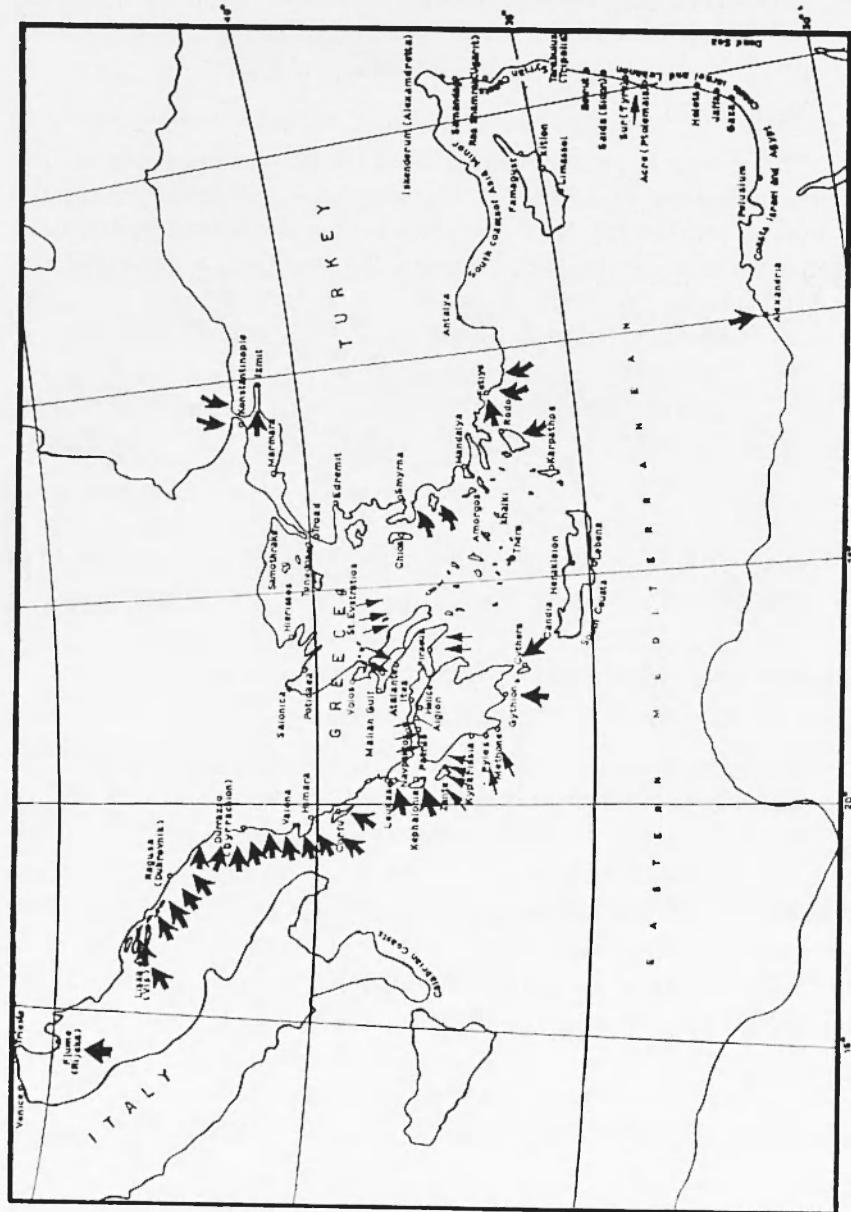

(G C: $37\frac{3}{4}$ N — 21 E, I=VII, M=? , d=n).

Ref: 25.

48. 1899 January 22. Messenia, Kyparissia, Marathos ($m=iii$).

(G C: $37\frac{1}{4}$ N — $21\frac{3}{4}$ E, I=IX, M=? , d=n).

The earthquake data have been obtained from A. Galanopoulos (1960, p. 25), but he makes no reference to tsunami.

ACKNOWLEDGEMENTS

I have been much assisted by Professor N. Ambraseys of the Imperial College — University of London — to whom I am indebted.

Without his invaluable help this work could not have been carried out.
